Subject: CSI - Toxicant Survey at American Cyanamid, Perrysburg, Ohio

Summary:

I told Dan we had discussed this and agreed with him and Phil Gehring that a CSI - toxicant survey should not be done at the subject facility if their information was correct and there was no process water discharge. Dan confirmed that some waste was barreled and trucked away, but that there was no process discharge. They will look in on the site when they are in the area in the near future, but will remove it from the list of CSI - toxicant surveys.
